## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Rosh is intrigued by numerical patterns. Today, she stumbled upon a puzzle while working with arrays. She wants to compute the sum of the third-largest and second-smallest elements from a list of integers. She seeks your help to implement a program that solves this for her efficiently.

##### ***Input Format***

The first line of input is an integer N, representing the size of the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

##### ***Output Format***

The output displays a single integer representing the sum of the third-largest and second-smallest elements in the array.

Refer to the sample output for the formatting specifications.

### **Sample Test Case**

Input: 10

10 20 30 40 50 60 70 80 90 100

Output: 100

### **Answer**

// You are using Java

import java.util.\*;

public class Main

```
{
    public static void main(String[] args)
    {
        Scanner s = new Scanner(System.in);
        //read size of array
        int N = s.nextInt();
        //read array elements
        int[] A = new int[N];
        for(int i=0;i<N;i++)
        {
            A[i] = s.nextInt();
        }
        //sort array in assending order
        Arrays.sort(A);
        //pick req numbers
        int ss=A[1];
        int tl=A[N-3];
        //find sum
        int sum = ss+tl;
        //print result
        System.out.println(sum);
    }
}
```

**Status :** Correct

**Marks :** 10/10
